

Website Design 2019

Prejudged Submission - Rubric Fulfillment Document

Zachary Wang, Aryn Chadha

Criteria	Criteria Addressed
Site is compatible with multiple platforms (20)	We made our website compatible on multiple platforms by implementing Bootstrap's media queries for many of the media elements that we found issues with. We also used Bootstrap's grid system of rows and columns to align content depending on the device.
Website elements are consistent across all pages (20)	<p>At first we found out was that there was no parallax scrolling on other pages besides the home page, so we added parallax scrolling on other pages as well for consistency throughout our website.</p> <p>We also made sure that the banner, navigation bar, and the footer were the same on every single page of the website.</p>
Website usability and navigation	To make the website more usable we put a navigation bar that was accessible throughout the website. We also put features where people typically expect to find them. For example, we put the address and contact in the footer.
Color, backgrounds, font, and sounds are appropriate for the topic	To give our website a luxurious yet trustworthy look, we chose a color scheme of black, a natural color that symbolizes formality and authority, and gold, which represents money.
Graphics appropriate for topic	We used graphics like tables, symbols and images to enhance the our website's experience. We made sure that the images and symbols the website used, had similar accents to the website itself.
Site interactivity functions and is error free	We made our site interactive by adding an animation and implementing features like, an interactive calendar and parallax scrolling to enhance the users experience.
